Objective: to understand the importance of considering the drivers, 3-dimensionality of the marine environment and areas of influence when defining the study and management areas.

Activity: 1) with your small team, explore your map and make a determination where your management area will be (consider drivers), and draw those boundaries on the map, 2) discuss potential “areas of influence” on that management area, and now draw the wider study area on your map.

Time: 45 minutes
